

Greenscape Pro AI Agent Strategy

A quick note before the list. I ranked these by where the money actually leaks, not by what got the most airtime on the call. A couple of the things Marcus cares about most didn't make the cut, and I'll say why at the end.

Assumptions I'm working from: everything has to live in and write back to GHL (Jenna was clear about that). Marcus wants tools that run on their own and only pull him in to approve things, so anything customer-facing keeps him in the loop. All the dollar math uses the client's own numbers: \$28K average project, roughly 150 jobs a year, and 35–40% of qualified leads lost at the proposal stage.

1. Proposal Generation Agent

What it's for: Get a quote out the door in a day or two instead of the six to nine it takes now.

What it does:

- Takes Marcus's site-walk notes, typed or spoken, and pulls out the scope.
- Prices it against the existing 200-line spreadsheet so the numbers are real, not guessed.
- Drops everything into the company's proposal template and flags anything it wasn't sure about.
- Pings Carlos for a render automatically on jobs over \$30K, then sends the draft to Marcus to check and send.

What it replaces: Marcus sitting down after every site walk to write the proposal by hand. Right now he's the only person who can turn notes into a scope, and that's exactly why the whole thing jams up.

ROI: The quote cycle drops from six to nine days to one or two. If we claw back even half of the qualified leads currently going to faster competitors, that's roughly 15 to 20 extra signed jobs a year. At \$28K each, call it **\$420K to \$560K** in revenue that's currently walking out the door.

Why it's first: This is the biggest hole in the bucket, and it's leaking every single week. The leads are already coming in, the pricing sheet is done, the design team is fast. Nothing is missing except speed, and the reason it's slow is that one person has to touch every quote. Fix that and everything downstream gets easier.

2. Closed-Lost Reactivation Agent

What it's for: Actually work the 1,400 old leads sitting in GHL instead of blasting them once in a while.

What it does:

- Reads each dead lead's notes in GHL, so it knows what they wanted and why it stalled.
- Writes a message that sounds like Marcus reaching out personally, not a mass text.
- Sends in small batches through GHL and logs whatever comes back.
- Hands anyone who bites straight to the proposal agent above.

What it replaces: Brittany's occasional re-engagement blasts, which work when she does them but aren't systematic.

ROI: 1,400 leads at a cautious 2% close rate is about 28 deals. At \$28K each, that's roughly **\$784K** in revenue that's just sitting there costing nothing to chase.

Why it's second: The dollar figure is bigger than anything else on this list, but it's a one-time backlog, not a leak that keeps bleeding. It also only pays off if quotes go out fast, so it makes no sense to build this before the proposal agent exists to catch the responses.

3. Post-Sign Workflow Agent

What it's for: Stop signed jobs from stalling out on HOA approvals, permits, and slow deposits.

What it does:

- Runs follow-up sequences for each stage: HOA package, permit revisions, unpaid deposit.
- Nudges the customer on a schedule and only pulls Jenna in when a human actually has to act.
- Shows every project's status on one screen so Marcus can see what's holding up the crew.

What it replaces: Jenna manually chasing the 8 to 12 jobs stuck in limbo at any given time.

ROI: Those stalled jobs represent **\$224K to \$336K** in revenue that's been won but not collected. Moving them faster pulls that cash forward, frees up several hours of Jenna's week, and keeps the crews from sitting idle between jobs.

Why it's third: It matters and it compounds, but this is money already in the door being slow to arrive, not new money. The two agents above bring in revenue; this one just speeds up revenue that's already yours.

4. Customer Update Agent

What it's for: Keep customers in the loop during the build so they stop calling the office in a panic.

What it does:

- Fires off an update when a CompanyCam photo goes up or a Jobber milestone hits.
- Sends it in Marcus's voice, so every job gets the halfway update he only manages on about a third of them today.
- Logs every touch in GHL so nothing slips.

What it replaces: The random mix of crew members texting customers, silence for days, and then the "what's going on with my yard" call Jenna fields daily.

ROI: Kills most of those inbound calls and drives referrals. Marcus already said the personal updates are why some customers refer him, so this is cheap and it clearly works.

Why it's fourth: It's a good one and it's easy, but it protects the customer experience rather than directly recovering lost money the way the first three do.

5. Lead Qualification Agent

What it's for: Screen raw leads by text before they ever land on Marcus's calendar.

What it does:

- Asks four or five quick questions on arrival: budget, scope, own or rent, timeline.
- Tags and scores the lead in GHL and only lets the good ones book time with Marcus.
- Politely turns away the obvious non-fits, the \$2K jobs and the renters.

What it replaces: The 4 to 6 dead-end calls Marcus takes every week out of the 15 to 20 that come in.

ROI: Saves him one to two hours a week and, more to the point, protects the time he spends on site walks, which is where he actually closes deals.

Why it's last: It's genuinely useful, but it saves time, not deals, so the impact is the smallest on the list. It beats crew coaching for the fifth spot because it feeds directly into the proposal funnel, but let's be honest about what it is: a time-saver, not a revenue driver.

A couple of straight answers

Why is my #1 the #1, when it happens to match what Marcus already said?

On the surface it looks like I just agreed with him. I didn't. It's first because the numbers say so: 35 to 40% of already-qualified \$28K jobs are lost at the proposal stage, and Marcus put his finger on the cause himself when he said he's the bottleneck. Everything else the business needs is already in place. This is the one fix that stops a leak that's happening right now and removes a person as the choke point. If the data had pointed somewhere else, I'd have ranked it somewhere else, regardless of what he told us.

One agent I looked at and left out.

The marketing and content agent, which was Marcus's stated #4. I dropped it because he undercut it himself on the call: he can't keep up with the leads he already has, and his ad ROAS is a healthy 4 to 4.5x. The business isn't short on leads, it's short on quotes. Pumping out more content just pours more water into a bucket that's leaking at the bottom. The crew coaching agent (his #3) was the closest call, but the math is roughly \$104K a year against the quote cycle's several hundred thousand, so it didn't earn a top-five spot either. It's the kind of thing a founder feels every day and overweights because it annoys him, not because it's where the money is.
